

1998 **SKEETER** THE 50TH ANNIVERSARY OF THE BIRTH OF THE FIRST BASS BOAT. PERFORMANCE FISHING BOATS

**Eat.
Sleep.
Fish.**

A red-tinted background image showing two people on a boat, with a fishing lure visible in the foreground.

A NEVER- ENDING FISH STORY

You were so innocent.

**UNTIL THE FISH
CAUGHT YOU.** Above anything

else fishing became your passion.

The fight.

**The rush.
The win.**

You'll drop everything for it.

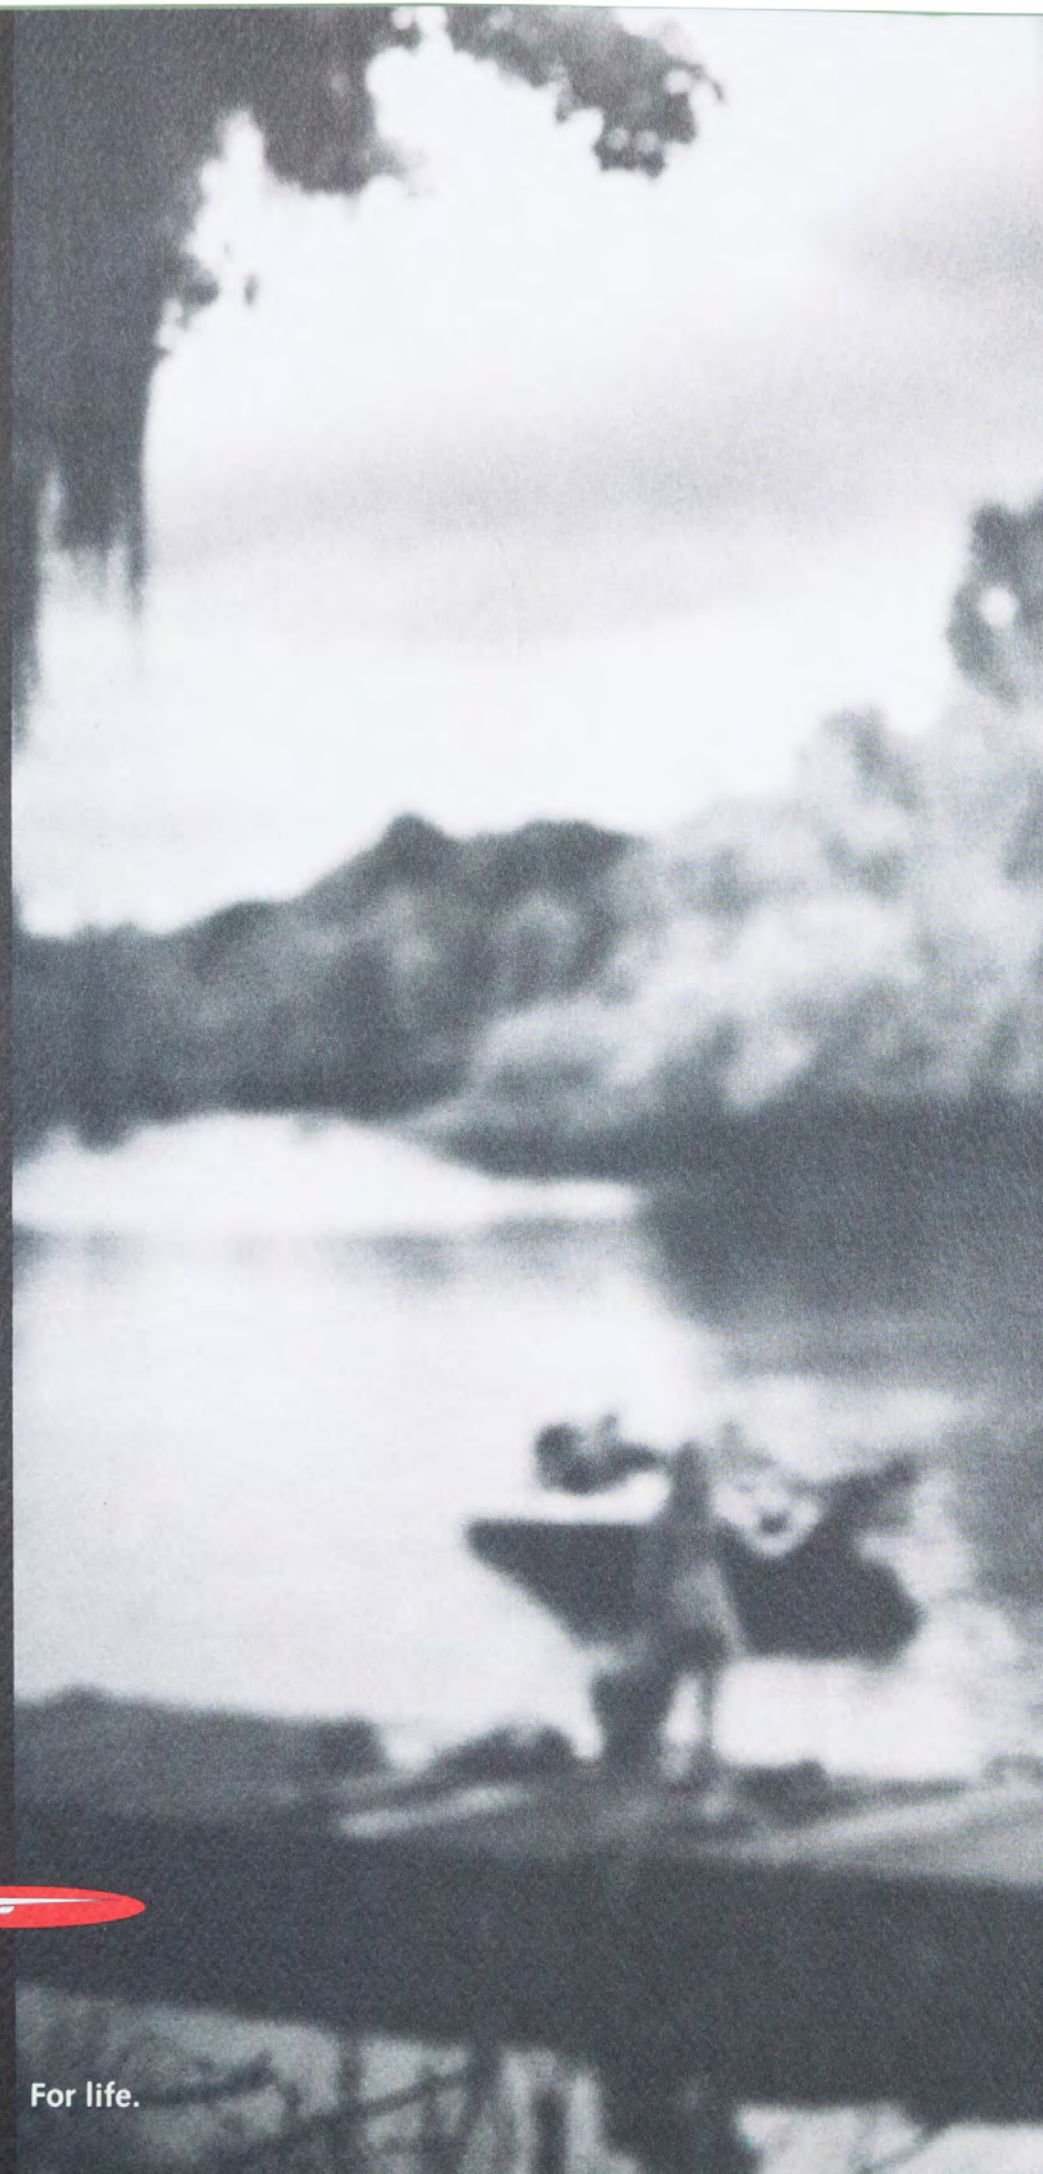

A RELENTLESS DRIVE THAT
HAS YOU ON THE WATER AT THE
BREAK OF DAY—ANY DAY—
EVERY DAY. That compels you
to catch the most, catch the biggest, be the best.

It's the one that got away, and the 697 that didn't.

Sunburns, raccoon eyes and sweat.

You're hooked. For life.

Our **ZX210c** tournament bass boat has the size and speed to put it at the head of its class. It's performance - engineered with a super-wide casting deck, oversized storage compartments and our X-TREME composite construction in hull, floor, deck, transom and other load-bearing areas. Plus, there are our cockpit command center with full instrumentation, an aerodynamically designed hull, a tournament livewell control system and our

stretched sponsons with unique no-splashwell design stern. The ZX210c: When you're ready to take the lead.

New larger rear storage compartments.

1650

The best way yet to get into an aluminum rough-water boat.

Eighteen feet of fishability and an amazingly smooth ride.

SS150

The 50th Anniversary of the birth of the first bass boat.

Not unlike your passion to fish there is a mystique that drives the most serious fishermen to own a Skeeter boat.

This is how it's been for 50 years.

In 1948 Holmes Thurmond of Shreveport, Louisiana, designed what would become a bass fisherman's dream come true -- the world's first bass boat. Made entirely of marine plywood with slanted sides, flat bottom and pointed bow, it was the first Skeeter.

Now, 50 years later, Skeeter is still the bass fisherman's choice. For a very good reason: our never-ending quest to make the best even better.

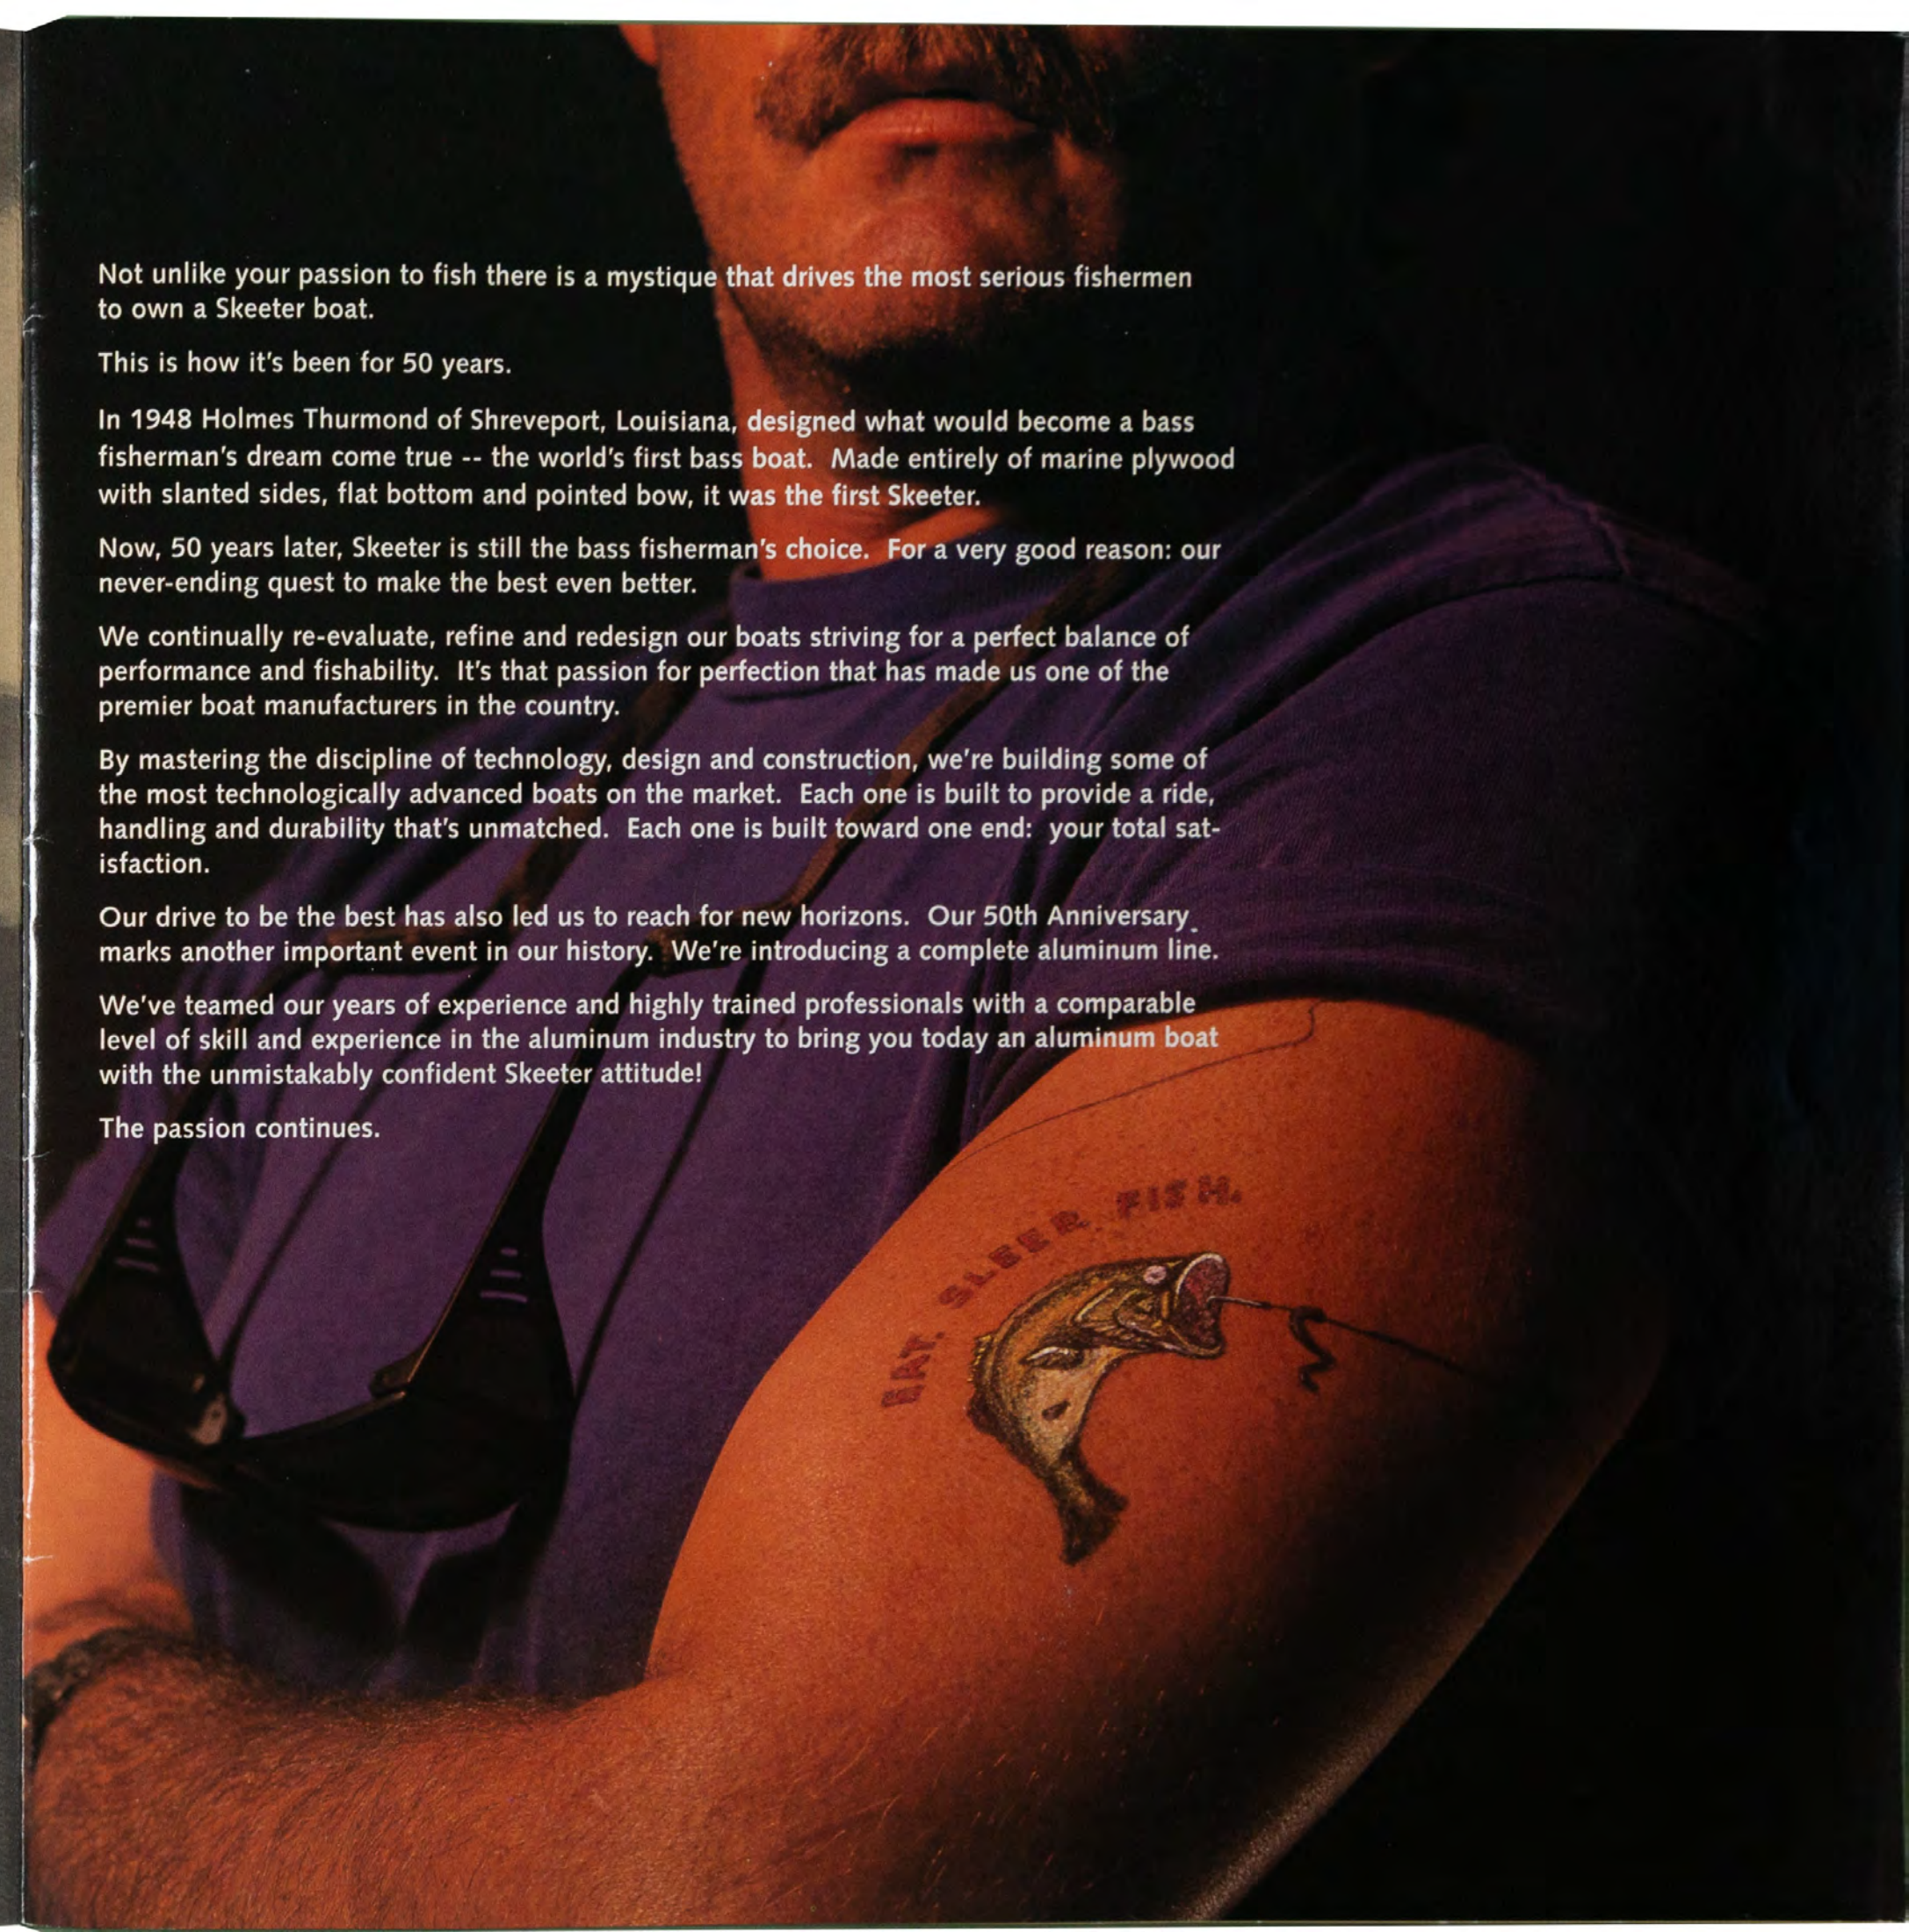

We continually re-evaluate, refine and redesign our boats striving for a perfect balance of performance and fishability. It's that passion for perfection that has made us one of the premier boat manufacturers in the country.

By mastering the discipline of technology, design and construction, we're building some of the most technologically advanced boats on the market. Each one is built to provide a ride, handling and durability that's unmatched. Each one is built toward one end: your total satisfaction.

Our drive to be the best has also led us to reach for new horizons. Our 50th Anniversary marks another important event in our history. We're introducing a complete aluminum line.

We've teamed our years of experience and highly trained professionals with a comparable level of skill and experience in the aluminum industry to bring you today an aluminum boat with the unmistakably confident Skeeter attitude!

The passion continues.

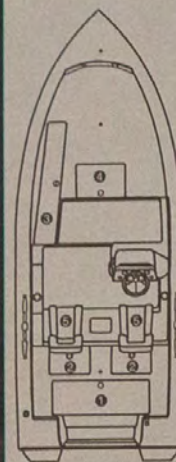

The SS140 bass boat is the perfect boat for the aspiring tournament angler or the weekend fishing enthusiast. It's packed with fishability features including two aerated livewells, Skeeter screened gauges in the cockpit, two insulated storage compartments and driver and passenger bucket seats. Yamaha's V MAX Series engines provide maximum performance with unsurpassed fuel economy.

Modular Wiring System

X-CEL Composite Transom

Stretched Sponsons and revolutionary No-Splashwell Design Stern

X-TREME Composite Stringer

X-TREME Composite Floor

Automatic Livewell Control System

Nested Hatch, aluminum frame deck structure

Roto Molded drop-in dry storage boxes

Contour driver and passenger seats with flip-down center seat

X-TREME Composite Deck

Cockpit Command Center with ZX Series screened gauges and lit rotary switches

Numerically Controlled Mastered, High Precision Transversely Symmetric Hull

Roto Molded drop-in dry storage boxes

Exclusive retractable Rod Staze™

Nested Hatch, aluminum frame deck structure

Recess cleats with retractable tie rope (port and starboard)

Soft Touch Bow Command Center

Bow Traction Mat design with Anti-Skid Grippers

Design and Engineering

What sets Skeeter uniquely apart from other boat builders is our understanding and use of technology.

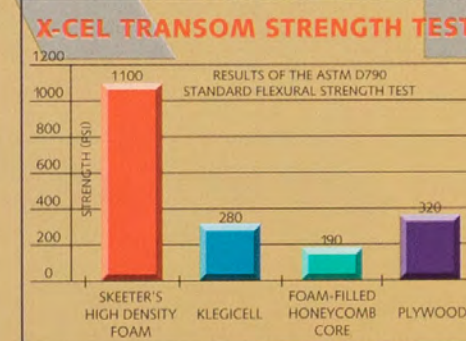

Our team of research and engineering specialists has practically reinvented the process of boat design. We apply the principles of aerodynamics, physics and 3-dimensional computer imaging to the design and construction of all our boats. The result: The ultimate in performance vehicles on the water.

Since our beginning we've had a tradition of leading the industry with breakthrough innovations. Again this year we continue to set the standard by which other boats will be judged with exclusive features that improve performance, appearance and fishability.

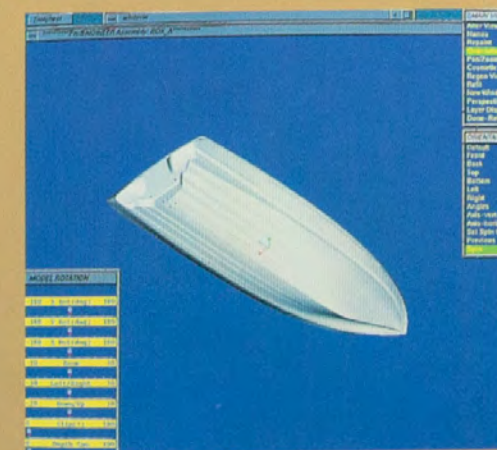

These include our X-TREME and X-CEL composite construction that adds strength and durability to areas like hull, deck and transom. Our reverse draft transom that adds buoyancy and reduces backslash. And our aerodynamically designed hull that enhances maneuverability and produces a smooth, dry ride. (In test after test, including a battery of tests in the Gulf of Mexico, Skeeter boats have proven to be some of the strongest, most durable boats on the market.)

Skeeter is continually looking ahead, driven as always to be the best. And as part of the Yamaha family, we're able to bring innovative products and features to market faster than ever.

Independent lab tests show that Skeeter's high-density foam transom is the strongest on the market today.

Skeeter's Numerically Controlled Mastered, High-Precision Transversely Symmetric Hull enhances maneuverability, while providing an amazingly smooth, dry ride.

Stretched Sponsons with a No-Splashwell Design Stern provide added lift and buoyancy and reduce backwash.

Three-Dimensional Computer Imaging allows our team of engineers to refine designs to exacting specifications, resulting in precision construction and outstanding performance.

X-TREME Floor
Skeeter's advanced one-piece X-TREME composite floor adds strength efficiencies through weight distribution of load-bearing areas.

X-TREME Deck
Skeeter's exclusive X-TREME all-composite deck adds overall strength and durability by removing all wood from load-bearing areas.

X-TREME Stringer
Skeeter's innovative X-TREME all-composite stringer gives strength without the added weight and streamlines the weight distribution more evenly.

X-TREME Hull
Skeeter's uniquely designed X-TREME composite hull strengthens the boat to last longer against heavy use.

X-TREME Pad
Skeeter's remarkable X-TREME pad reinforces an all-composite hull for heightened durability in high-stress areas.

X-CEL Transom
Skeeter's reformulated X-CEL composite transom is lighter than any other material used in the boating industry and three times as strong.

Skeeter's Patented Reverse Draft Transom adds buoyancy to reduce backslash and creates a balanced boat from stern to bow.

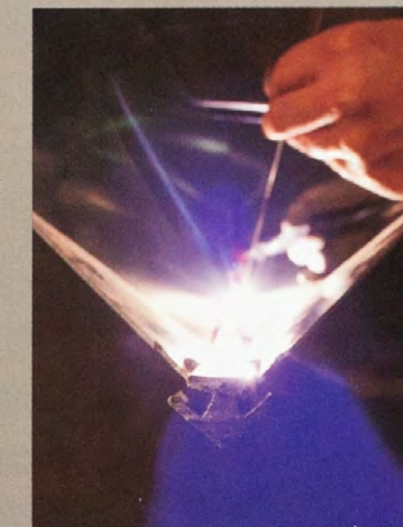

Our drive to be the best has always led us to reach for new horizons. That's why this year we're introducing a complete line of aluminum boats.

The Aluminum Skeeter

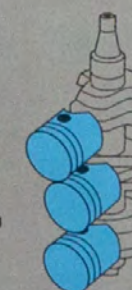

Skeeter's aerodynamically designed welded hull gives our aluminum boats an exceptionally smooth, dry ride.

All Skeeter boats, including this new aluminum line, are powered by Yamaha engines. Yamaha, like Skeeter, has a long-standing reputation for quality, high-performance products that are durable and reliable. Yamaha's Midrange Series outboards are a powerful case in point.

The Yamaha Midrange—a pulse-tuned three-cylinder design delivers strong, responsive acceleration, quiet operation and exceptional fuel economy.

The Skeeter Aluminum Boat

We've thought of producing an aluminum line of Skeeter boats for some time. But we wanted the end product to be right before moving ahead.

Now, we're ready. We've combined our extensive experience with a similar degree of expertise in the aluminum field to create a series of aluminum boats that merits the Skeeter name.

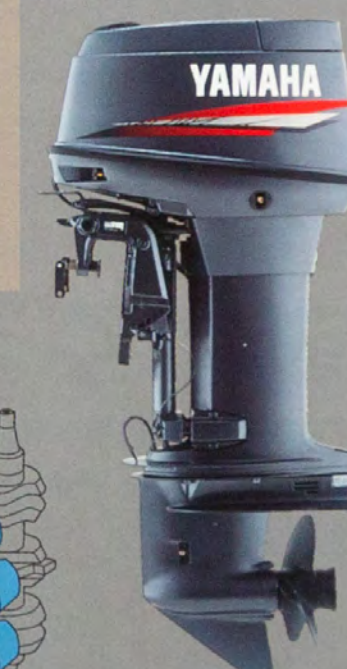

The technology and the design strengths used to produce our fiberglass boats have also shaped these new boats. The dedication to quality and craftsmanship that's evident in all Skeeter boats is also apparent in this new line.

Every aluminum boat is built with performance in mind. You'll find the ride, the handling and the fishability to be unquestionably Skeeter. Features like welded construction, aerodynamically designed hulls and composite "no wood" floors and decks (with a lifetime warranty against rotting) all make for unsurpassed strength, durability and smoothness of ride.

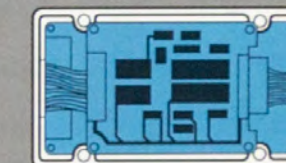

Welcome to the new aluminum Skeeter!

Skeeter builds in lasting performance with light yet rugged composite material in floors and decks. There's no rotting ever. We guarantee it!

THE MICRO-COMPUTER IGNITION SYSTEM precisely adjusts ignition timing for smooth piston firing across the RPM range, providing peak performance at any speed.

Tournament Series Engineered and built for the tournament fisherman, our ZX line of fiberglass and aluminum bass boats is so advanced the competition may never catch up. All fiberglass models include

Skeeter's exclusive X-TREME composite construction for unmatched strength and durability, and aerodynamically designed hulls for maximum acceleration, superior maneuverability and our legendary smooth, dry ride. Standard features include extended casting decks, contoured cockpits with full instrumentation and two roomy aerated livewells with our dependable tournament livewell control system. Skeeter's all-new aluminum bass boats also demonstrate our unwavering commitment to quality. See for yourself on the black pages.

TOURNAMENT FAMILY SPORT BIG WATER FISHERMAN

Big Water Series Performance-driven and built to last, this series features our large, wide-beamed fiberglass and aluminum boats — both bay and V-bottom boats. Selected fiberglass models feature Skeeter's exclusive X-TREME composite construction for extraordinary strength and exceptional durability. Others offer our V-pad hull for maximum stability and super-responsive handling. All have roomy aerated livewells and huge tackle and storage boxes. Our all-new aluminum models include must-have features like aerated livewells with timers, comfortable fold-down fishing seats and lockable rod lockers. All aluminum models offer your choice of single-console or tiller control. Turn to the green pages if you're serious about big-water performance.

Family Sport Series Our fiberglass fish-and-ski boats are the ultimate in recreational vehicles! They offer the best of both worlds, with the most popular features of Skeeter's legendary bass boats and those of stylish ski craft. You'll find lots of storage for rods or skis, aerated livewells, comfortable driver and passenger bucket seats, and stainless steel, sure-grip ladders. This series also includes spacious aluminum pontoons for all-around family fun. For cruising, fishing or just old-fashioned get-togethers, our pontoons are made to make your day on the water — with features like bimini tops, giant rod boxes and refreshment

centers. Turn to the red pages and start planning the times your family will never forget.

Fisherman Series Our Fisherman Series makes Skeeter's exceptional fiberglass and aluminum bass boats more affordable than ever. More compact and lighter than our tournament boats, these models offer popular features like aerodynamically designed hulls, aerated livewells, roomy casting decks and plenty of storage space. This series also includes our workhorse models: our durable welded jons to take you to your favorite fishing holes or anywhere else you want to go on the water. With tough 100-gauge aluminum hulls, welded construction, one-piece extended ribs and stamped-in keels, they're ready for long years of service. Check out this value-packed series on the gray pages.
